## INTERNSHIPS PLANT RESEARCH & CONSERVATION

### **OPPORTUNITIES FOR FORDHAM UNIVERSITY UNDERGRADUATES IN THE BIOLOGICAL SCIENCES**

Internships are available at The New York Botanical Garden throughout the year for individuals interested in gaining professional experience in plant research and conservation.

Working directly with NYBG scientists and their technical teams, interns participate in cutting-edge research in systematic botany, molecular phylogenetics, structural botany, genomics, bioinformatics, museum collections curation, geographic information systems, ecosystem and species conservation, and economic botany.

In addition to individualized internship projects, summer interns have the opportunity to engage in weekly intern enrichment activities and discussion sessions with scientists that build skills and provide broad exposure to the research and conservation activities at NYBG. Internships in fall and spring semesters allow flexibility of schedule for interns still in school.

For additional information and application forms, please contact the NYBG Volunteer Services Department at 718.817.8765 or [volunteer@nybg.org](mailto:volunteer@nybg.org)
